Used tools

HashiCorp

Terraform

docker

Google Cloud Platform

git

kubernetes

GitHub

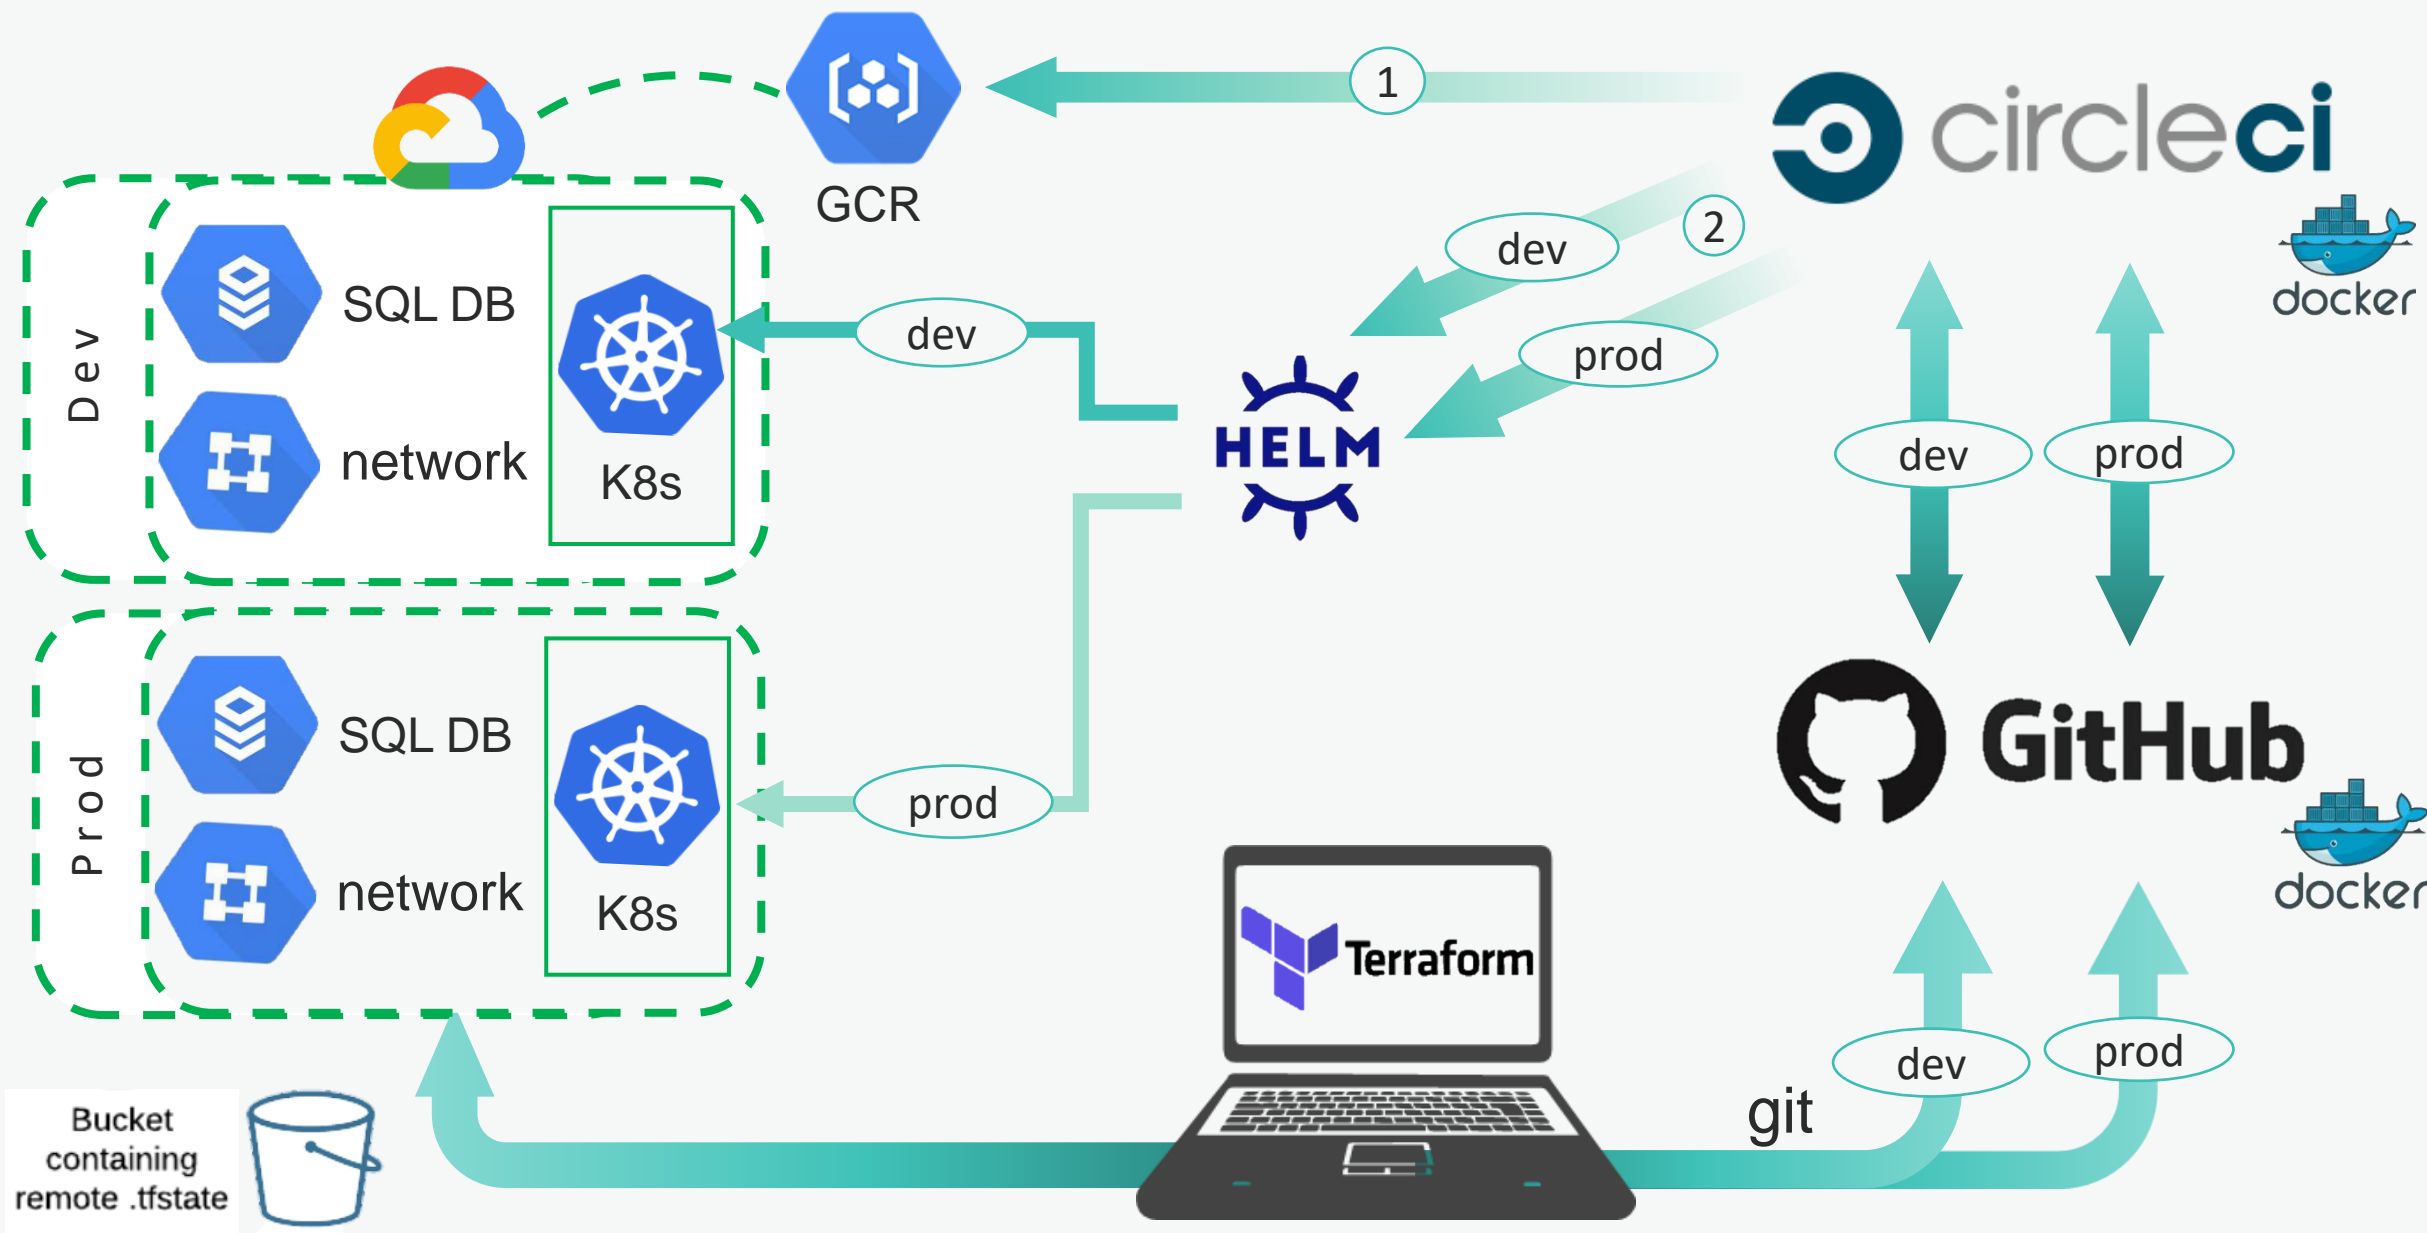

circleci

Infrastructure

GitHub

- Chose a suitable project "Address Book"
- Created two branches for different environments
- Created a separate repositories for Helm-Chart

Helm – Chart

- Creating charts for kubernetes (deployment, service, ingress, configmap)
- Optimized charts for two environments

Terraform

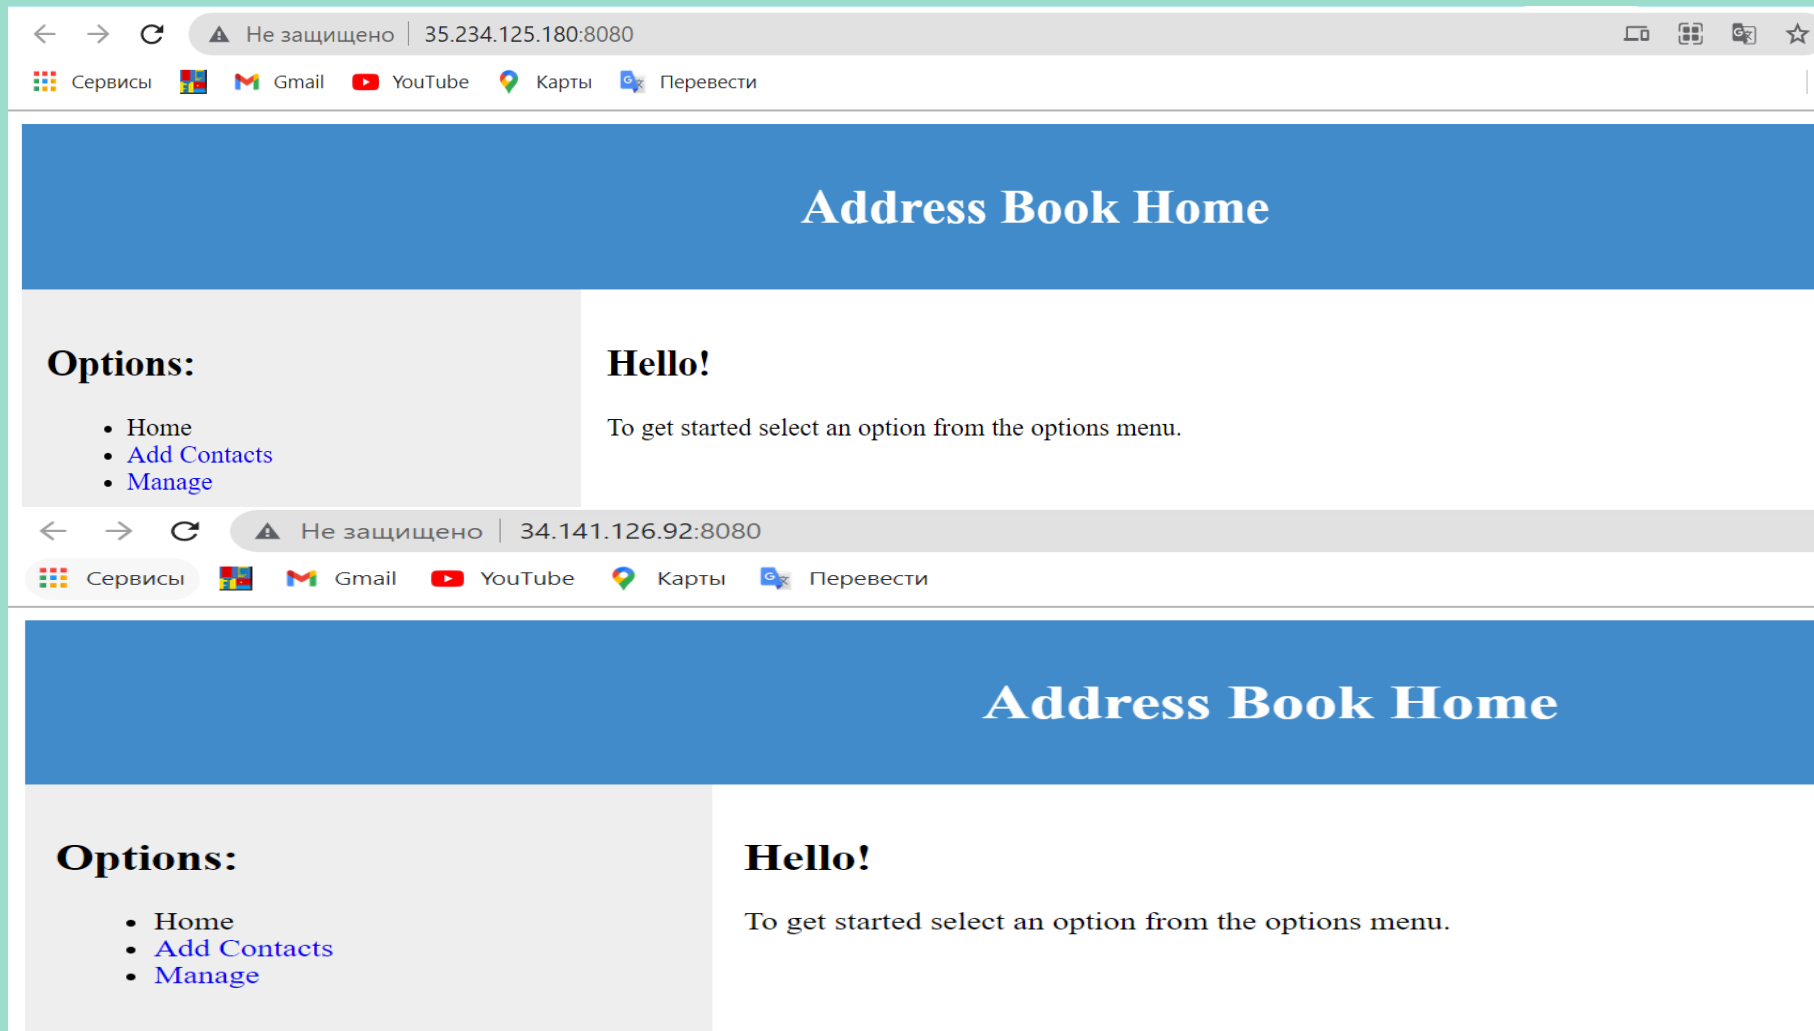

- Creating all necessary resources for a project deployment
- Creating zero image and add sensitive data in k8s cluster
- Creating two environments
- Using remote state for all environments

CircleCI

- Creating 2 jobs for build and push image
- Changed config.yml for different environments

Result
